SUMMARY

Software engineer with 2+ years building scalable, real-time systems and AI-driven products in 0→1 environments. Drove 10x latency improvements, reduced failures by 20–25%, and improved system reliability and revenue at scale.

EXPERIENCE

One800

Software Engineer

Nov 2024 – Present

Bengaluru, Karnataka

- Led development of a customer-facing app, SEO-optimized landing pages, and a service-center app with role-based access, **delivering a seamless experience for 30K+ users** on web and mobile.
- Built **Redis + BullMQ** queues pricing system with transactional guarantees which **reduced checkout failures by 20–25%**.
- Built a **RAG-based support chatbot** with tool-calling (slot APIs) cutting first-response time **from hours to under 10s**.
- Shipped quotation engine with multi-layer caching and optimised database queries **increasing revenue by 50%**.
- Developed a real-time scheduling and slot allocation system using **event-driven architecture**, **WebSockets**, and background jobs, **reducing polling by 70%** and improving system responsiveness.
- Integrated **payment gateways** with idempotency key and signed webhooks leading to **zero duplicate charges**.
- Implemented **live repair video streaming** using RTSP and Bunny.net, improving **service transparency by 50%**.
- Automated inventory tracking via **Zoho API** sync with **PostgreSQL**, built dashboards monitoring SLAs, revenue, and operations and deployed services using **AWS EC2** and **Vercel** with **Redis** and **CI/CD** pipelines.

Suggaa Ventures

Software Developer

May 2024 – Oct 2024

Bengaluru, Karnataka

- Built admin dashboard with real-time KPIs and **AI chatbot** (Vercel AI SDK), cutting **ops reporting effort by 60%**.
- Refactored backend APIs and queries cutting average response time by 40% and **reduced infrastructure costs by 50%**. Resolved ride-flow bottlenecks, **reducing user complaints by 20%**.
- Implemented asynchronous workflows using **Zeplo queues** and **RabbitMQ**, cutting execution time from **2s to 200ms**.
- **Optimized pricing algorithms** for fare and built backend APIs with structured business logic for ride workflows.
- Migrated **Hasura GraphQL** to **Supabase** with PostGIS/pgHTTP extensions which **reduced API response time by 70%**.

The Internet Folks

Backend Developer Intern

Nov 2023 – Apr 2024

Remote

- Added CSRF validation, Prisma ORM migration, and **Chai, Mocha, SuperTest** coverage, cutting production bugs by 20%.
- Built a comments and discussion feature that **increased user engagement and retention by 25%**.
- **Enhanced data privacy and access control** with email and password gating, resulting in a **15% uplift in lead conversions**.

PROJECTS

Trade Execution System | Python, FastAPI, Docker, Apache Kafka, Redis, PostgreSQL

- Built a **distributed microservices trading platform** with a Dockerized API Gateway, **handling high-concurrency order requests** and real-time execution **via FastAPI and WebSockets**.
- Designed an **Apache Kafka pipeline** to decouple order ingestion, matching, and persistence enabling high-throughput processing and **batched PostgreSQL** writes to minimize I/O overhead at peak load.
- Implemented an **in-memory order** matching engine using Redis and priority queues for low-latency buy/sell execution across concurrent trading sessions.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Python

AI / LLM: LangChain, OpenAI API, RAG pipelines, Tool-calling agents, Vercel AI SDK

Backend: Node.js, REST APIs, WebSockets, BullMQ, RabbitMQ, Prisma ORM, GraphQL, FastAPI

Frontend / Mobile: React.js, Next.js, React Native, Expo, Tailwind CSS

Databases & Cloud: PostgreSQL, Redis, MongoDB, Supabase, AWS (EC2, S3), Vercel, CI/CD

EDUCATION

Dehradun Institute of Technology

B.Tech in Computer Science

Aug 2020 – May 2024

CGPA: 8.05/10

Relevant coursework: Operating Systems, DBMS, Distributed Systems, Data Structures & Algorithms
